GTM Engineer | AI Automation | Clay | Outbound Systems

Professional Summary

GTM Engineer and Automation Specialist with 2+ years of hands-on experience designing and operating outbound revenue systems across ICP definition, TAM research, account and contact enrichment, AI-assisted personalization, signal-based targeting, multichannel sequencing, deliverability, suppression, and campaign reporting. Experienced in building Clay workflows, n8n and API automations, structured AI research systems, and repeatable campaign operations for internal initiatives and confidential B2B client engagements through GetGTM. Strong at converting ambiguous growth requirements into auditable, campaign-ready workflows that improve data quality, execution speed, and GTM decision-making.

Core Skills

- GTM Engineering: ICP definition, TAM scoping, account segmentation, signal-based targeting, outbound architecture, campaign operations, reporting
- Clay and Data Enrichment: Clay, Claygent, AI research columns, enrichment workflows, domain matching, company and person validation, data waterfalls
- Automation and APIs: n8n, Zapier, Make, Google Apps Script, SuperAGI, API and JSON workflows, webhooks, structured AI research
- Prospecting and Research: Apollo, Lusha, Surfe, Leadmagic, PhantomBuster, LinkedIn Sales Navigator, public-web research
- Outreach and Sequencing: Instantly, Smartlead, PlusVibe, Selzy, Heddl, Waalaxy, ConnectOut, WhatsApp and LinkedIn workflows
- Deliverability and Data Quality: SPF, DKIM, DMARC, domain and inbox troubleshooting, bounce and reply monitoring, suppression, duplicate checks, auto-halt-on-reply logic
- Technical and Reporting: CSV workflows, deterministic matching, employment-date logic, Google Sheets, Google Slides, campaign audits, stakeholder documentation

Professional Experience

GTM Engineer and Automation Specialist

Adaptive Marketing India / Institute of Product Leadership (IPL) — Bengaluru, Karnataka, India

Jun 2025 – Present

- Designed and deployed end-to-end GTM automation systems covering ICP definition, account research, enrichment, AI-assisted personalization, multichannel outreach, and reporting using Clay, n8n, Apollo, Lusha, Zapier, and SuperAGI.
- Built repeatable enrichment and routing workflows that generated more than 1,500 ICP-qualified leads per quarter.
- Developed email, LinkedIn, and WhatsApp workflows with automated follow-up and reply-based halt logic, reducing manual outreach operations by approximately 50–60%.
- Executed coordinated campaigns across Instantly, Smartlead, PlusVibe, and Selzy, targeting more than 50,000 prospects across segmented audiences and achieving 65–70% open rates and 30–35% reply rates in selected campaigns.
- Diagnosed and resolved SPF and DKIM deliverability issues during a 6,000-lead cold-email campaign without interrupting the sending schedule.
- Built AI-assisted personalization workflows using agent automation and Creatomate for scalable video and copy generation.
- Led GTM execution for Product Leaders Forum Convergence events in Hyderabad and Bengaluru, including account mapping, audience segmentation, and coordinated outreach that generated 140+ paid registrations.
- Reduced operational overhead by more than 100 hours per month through automated enrichment, routing, follow-up, and campaign reporting; created an internal automation playbook for repeatable execution.
- Built corporate-affairs workflows for hiring-manager signals, industry-leader outreach, and startup or product-challenge prospecting using n8n, Clay, Delightloop, and Google Sheets.
- Created campaign templates, monitored engagement metrics, and adjusted targeting and messaging based on persona-level performance.

GTM Engineer and Automation Consultant

GetGTM — Remote

2025 – Present

Provide GTM engineering and outbound-operations support for B2B client engagements, including SPRY Health and a confidential HR and workforce-technology client. Client names and sensitive campaign details are disclosed selectively based on client confidentiality requirements; project scope, systems, and outcomes can be discussed in interviews.

SPRY Health — Clay-to-Outreach GTM System

- Designed and implemented a Clay-to-outreach workflow for a US healthcare software client serving outpatient physical, occupational, and speech therapy organizations.
- Translated the ICP into company and role filters, including organization type, company size, clinician count, geography, exclusions, and target clinical roles.
- Built the workflow from company discovery and validation through person-level sourcing, structured AI research, current-role verification, evidence capture, and campaign-ready enrichment.
- Solved a data-modeling issue by separating company-level records from person-level records and establishing the correct sequence for sourcing identities, titles, LinkedIn URLs, company domains, and evidence URLs.
- Used exact company-domain matching, employment-history extraction, and deterministic employment-overlap logic to identify qualified referenceability prospects.
- Applied suppression rules across existing customers, active pipeline accounts, previous campaign contacts, duplicates, excluded companies, invalid profiles, unverified roles, and missing relationship matches.
- Prepared controlled outreach batches with separate routing and personalization fields for LinkedIn and email execution; produced a verified 16-lead next campaign batch after reconciling live campaign history.
- Configured and monitored LinkedIn and email campaigns in Heddl, investigated dynamic-variable and trigger issues, and documented access, mailbox, pause, and platform limitations.
- Configured social listening around documentation, EMR dissatisfaction, AI scribes, billing, authorization, workflow friction, and clinic expansion; categorized 60 signals into 7 high-fit, 11 medium-fit, and 42 low-fit opportunities.
- Produced campaign audits, weekly pulse reports, stakeholder updates, and next-step plans connecting data quality, execution status, platform constraints, and GTM performance.

Confidential HR and Workforce Technology Client — Signal-Led GTM Campaign Architecture

- Reset broad outbound activity into separate signal-led campaigns based on verified account and business evidence rather than static prospect volume.
- Designed campaign hypotheses around provider displacement and growth-stage HR complexity, with separate audience logic, evidence rules, and messaging requirements.
- Defined account-level ICP criteria including US company status, employee range, industry, company domain, growth indicators, hiring activity, and business-stage context.
- Cleaned, normalized, deduplicated, and reviewed account overlap across source lists while preserving source-accurate records for auditability.
- Designed Clay research inputs, structured outputs, decision logic, credit controls, buyer-priority rules, contact construction, and account- and contact-level suppression gates.
- Planned evidence-backed messaging, CTA control, follow-up structure, one-pager usage, launch-readiness checks, and feedback loops for campaign execution.
- Converted campaign requirements and meeting instructions into documented, repeatable GTM workflows for internal review and client execution.

GTM Associate, Volunteer

Product Leaders Forum (PLF) — Bengaluru, Karnataka, India

Jun 2025 – Present

- Managed outreach and registration operations for PLF community events, representing IPL as an education partner and coordinating messaging for product leaders and senior professionals.
- Contributed to 194+ total ICP registrations across multiple events through audience segmentation and peer-level outreach.

Leadership Success Consultant

SeckureIT Remote — Remote

Feb 2023 – Jul 2023

- Generated and qualified leads using multiple prospecting channels for an EdTech-focused cybersecurity startup.
- Built a repeatable sales pipeline and scheduled meetings that supported broader business-growth initiatives.

Growth Marketing Trainee

Ola (ANI Technologies) — Bengaluru, Karnataka, India

Jul 2022 – Dec 2022

- Managed lead generation and outreach for buyers and sellers in the pre-owned car marketplace, supporting growth experiments across WhatsApp, landing pages, and micro-funnels.
- Improved conversion points across the GTM funnel from lead to test-drive booking and sales by coordinating with sales and marketing teams.

SDR / Business Development Executive

Ola (ANI Technologies) — Bengaluru, Karnataka, India

Jan 2022 – Jun 2022

- Drove lead generation, inside sales, and market research in a fast-paced B2C environment.
- Engaged prospects, identified pain points, and converted leads into sales opportunities.

Selected Technical Projects

SQL Intent Router

- Designed an n8n-based lead-routing concept that evaluates lead intent, assigns a score, segments prospects into multiple categories, and routes them into relevant sales sequences.
- Structured the workflow to reduce manual lead handling and align follow-up with prospect fit and engagement.

GTM Campaign Tracker

- Built and deployed a GTM campaign-tracking application through GitHub and Vercel for monitoring campaign activity, lead status, and execution workflows.

Local AI GTM Automation Stack

- Experimented with self-hosted n8n and Ollama-based local AI workflows for GTM research, lead processing, and automation support.

Education

Bachelor of Arts

REVA University — Bengaluru, Karnataka, India

Jun 2019 – Jun 2022 | CGPA: 7.8

Coursework: Economics, Political Science, Journalism, Marketing and Advertising

Additional Information

- Languages: English, Hindi, Kannada, Telugu, Tulu, Tamil
- Comfortable with remote collaboration, documentation, stakeholder communication, and EU-aligned working hours
- Available to discuss confidential client work through anonymized workflows, technical architecture, data models, and campaign outcomes

Client Confidentiality

The consulting projects listed above were delivered through GetGTM. SPRY Health is named because this engagement can be referenced; the HR and workforce-technology client is anonymized because its policy restricts public disclosure. Private campaign assets, prospect lists, and sensitive operational details are not included, but the underlying GTM systems, workflow architecture, research methods, data-quality controls, automation logic, and outcomes can be explained in detail during an interview.
